Item #108

“M” Wheel Detail Set

Rev 110110

Caution: Small Parts. Not recommended for children under 12 yrs of age. Use Care when handling – sharp edges. Use of this item in its intended purpose may violate the safety standards of the original item for which it is intended to be used with.

This kit includes front wheel detail parts for the Ertl “M” & revised “H” series tractors. It includes everything needed to detail two tractors. Note: Due to size difference, this kit will not work for the Ertl 200-400 series tractors. We hope to have this kit available at a later date.

1. Remove parts from frame. Using supplied pins, glue center cap and ring under pin head.
2. Stick these assemblies in a piece of foam or cardboard, and paint red.
3. Trim pin shaft as short as possible, and test fit with outer disc. The outer disc does not get painted.
4. Glue assembly together.
5. Test fit on tractor. Make sure pin shaft stub clears rivet that holds wheel in place.
6. Prepaint hubs on tractor silver.
7. Carefully glue hub assembly to tractor wheel rim.
