Item #134

Grain Bin Platform Kit

Rev 120110

Caution: Small Parts. Not recommended for children under 12 yrs of age. Use Care when handling – sharp edges. Use of this item in its intended purpose may violate the safety standards of the original item for which it is intended to be used with.

The TractorFab grain bin platform kit includes two large platforms, (generally used at the top of a grain bin, or as an intermediate resting platform), and two small steps, (generally used just below the main entry door of the bin).

This kit has been recently revised to make the bending process easier.

Bend as shown at right. The large platform can be bent the opposite way, to make a left handed platform as shown in the photo below.

Four pins are included with each large platform for mounting. Use the drill template guide, or mark by hand, and drill the grain bin with a #74 drill bit.

With the pins in the platform holes, insert the pins through the drilled holes in the bin, and bend the pins over to keep in place. Glue the pins after bending.

If a TractorFab ladder cage is being used with the platform, the cage can be cut as shown below to match it up with the platform edge.
